

## Duo Top Xtra Anthracite

**MARNIX OPP – 11,236 SQM**

### High Performance Single Layer Roofing Membrane

Eagle DUO Top Anthracite is the new high performance membrane from Eagle Insulations. The DUO membrane is produced using state-of-the art technology with a dual compound: SBS modified compound on the underside to facilitate an easy and quick application and great bonding with any surface, even on overlay systems.

On the upperside Duo Top is made with a high grade APP modified bitumen with a -20°C cold flexibility. The top coating protects the membrane against the UV rays and also avoids marking the membrane during the application. DUO Top comes with different finishes such as the anthracite ceramic granule that provides a great aesthetics to the roof.

#### Application

DUO Top is a high performance membrane reinforced with a 250grs polyester composite carrier that assures the highest performance against impacts, roof movements and a great dimensional stability. It can be applied by different methods:

#### Torch On

Full or partially bonded in new build or even on overlay systems.

#### Mechanically Fixed and Hot Air Welded

The high performance reinforcement allow the contractor to apply the membrane by mechanical fixing and hot air welding the overlaps when naked flames are not allowed on the roof.

#### Guarantees

Duo Top comes with 15 years insurance backed when installed as a single layer by one of the major European insurance companies. For other systems and guarantees please check with our technical department.

MASTIC ASPHALT	CONCRETE	PIR INSULATION	TIMBER	FELT OVERLAY
X	X	O	O	X

(x) = Application covered (o) = Optional venting layer or additional check required.

For additional information check the ATG certificate or contact our technical department.
